

Lavy's

Requirements:

- A brain
- An internet connection (**Not** school wifi)

1. First open

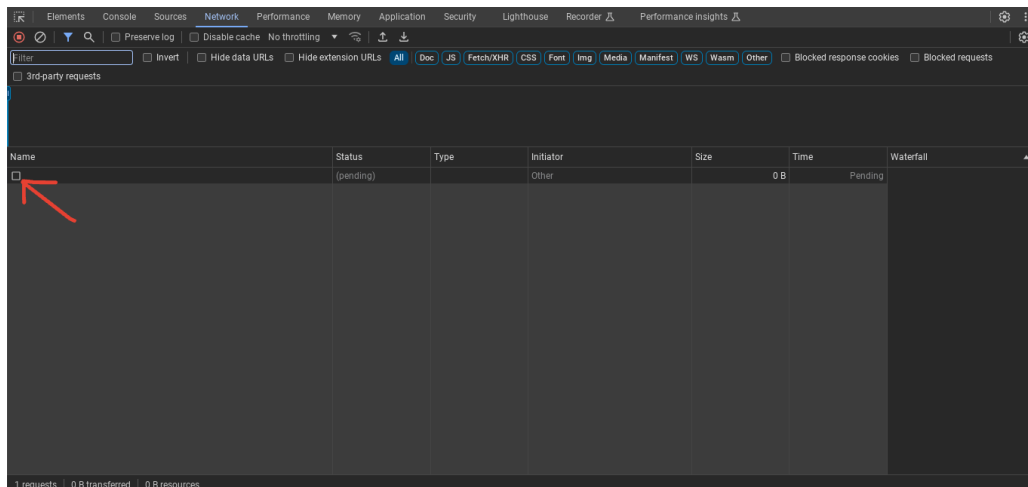

'devtools://devtools/bundled/devtools_app.html'

2. Second open

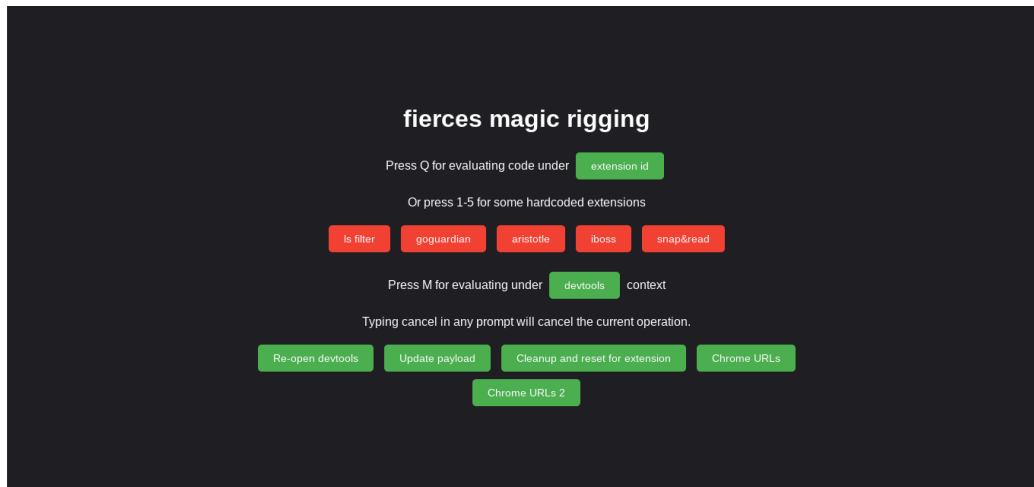

'devtools://devtools/bundled/devtools_app.html?experiments=true&wss=rig.ccsd.store'

If is not already in the 'Network' tab switch to it

3. Double click the small gray box:

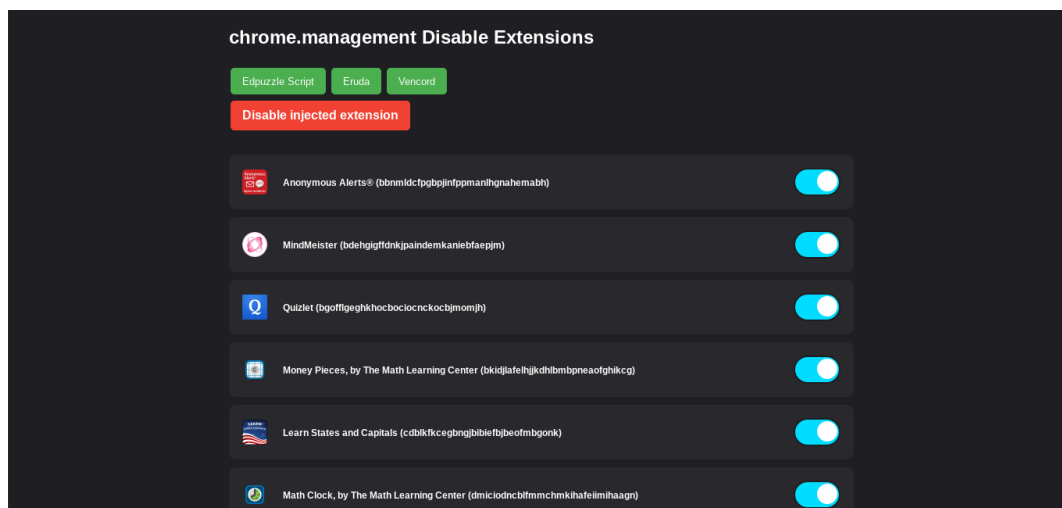

4. This should pop up:

5. Click the 'Ls filter' button (the first red button)

6. After that this should pop up:

7. If you want to only disable Lightspeed filter then just click on 'Disable injected extension' if not than scroll through th extension list and choose one you want to disable

8. Profit

Note:

Do NOT leak this to **ANYONE** or is gonna have a very high chance of getting completely blocked

Another note:

Do **not** update your Chromebook to a higher version then the one you currently have 'v20'

Another other note:

If your Chromebook or it get reset you gotta do the exploit all over again (the exploit is only temporarily)

Pro tip:

When your in school use a hotspot

Pro tip 2:

Don't show anyone of this keep it **private**
